WHAT IS...

LaTeX?

CALIFORNIA STATE UNIVERSITY
SAN BERNARDINO
Department of Mathematics

LaTeX is the mathematician preferred method for writing up mathematical documents.

Come join us as we walk you through a laid back introduction to using LaTeX in your mathematics courses.

During the first 25 minutes, we will tell you what LaTeX is, how to get started using it, and many useful tips. This will be followed by some guided activities as you practice working with it on your own devices. Templates for use in homework and projects will be provided. No previous knowledge of LaTeX is required.

Ideally come prepared with access to a computer so you can practice along on the spot.

Hope to see you there!

Dr. Youngsu Kim, Dr. Bronson Lim, and Dr. Jeffrey S. Meyer
